SnapCAD Installation Guide

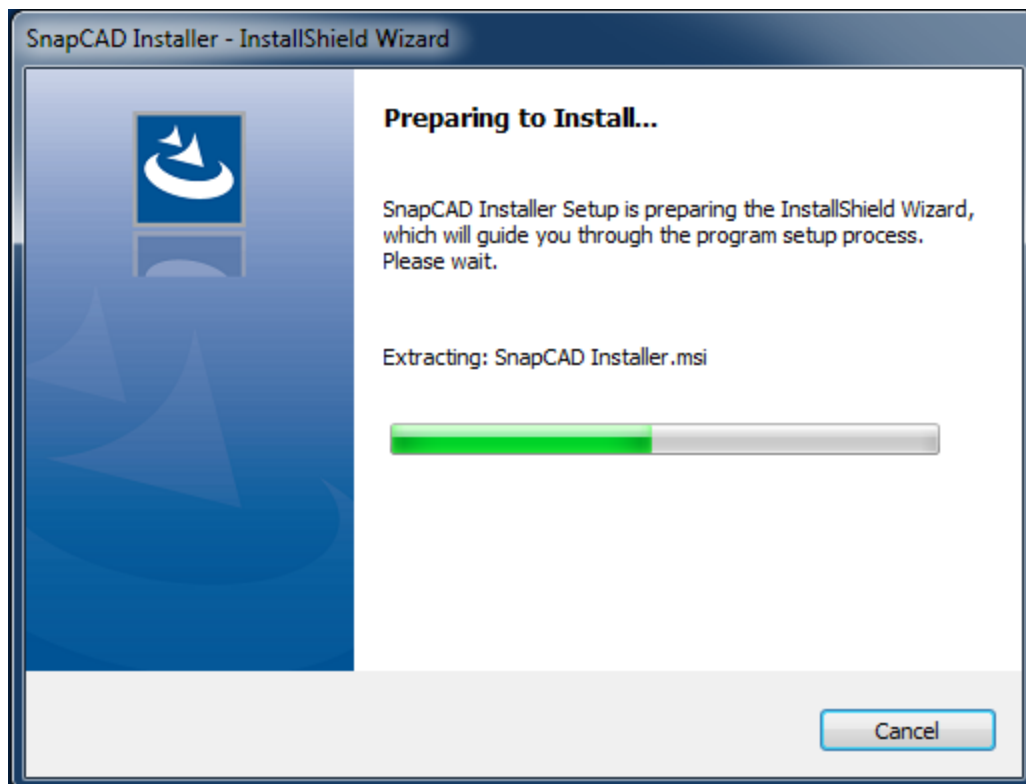

Get started building your first robot in minutes!

Before we start building models in SnapCAD, we need to first download and install the program. This can be done by navigating to the SnapCAD download page (<http://www.vexiq.com/snapcad/>) and selecting the 'Download' button. Don't forget to register your email to be notified of updates!

Note: You will need administrator privileges to install the SnapCAD software!

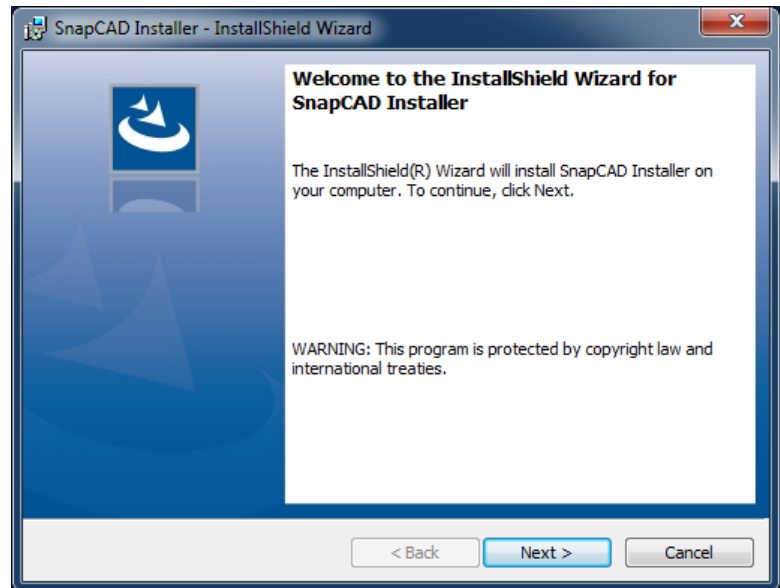

Step 1 – Download and Prepare the Installer

From the [SnapCAD website](http://www.vexiq.com/snapcad/), click on the download link to start the download process. Once completed, run the SnapCAD installer to start the installation process. The SnapCAD installer will first need to configure itself for installation.

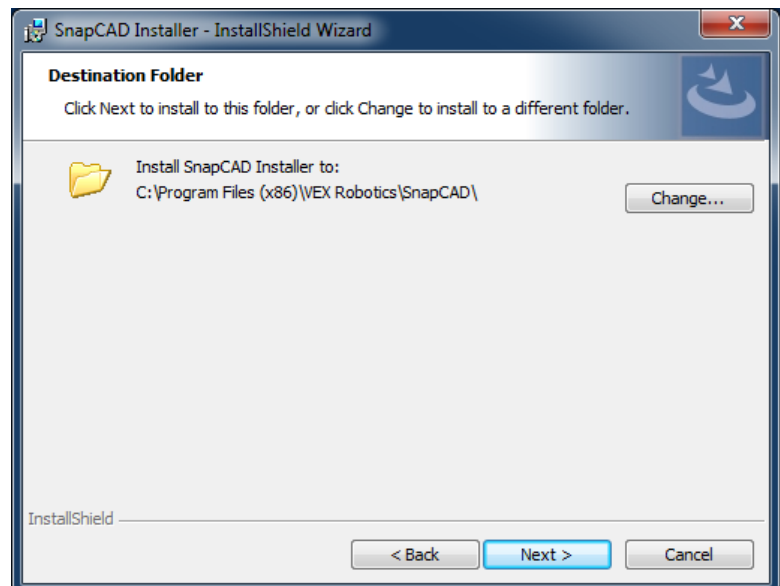

Step 2 – Start the Installer

Once the SnapCAD installer has finished its initial configuration, click the "Next" button to continue the installation process.

Step 3 – Choose an Install Location

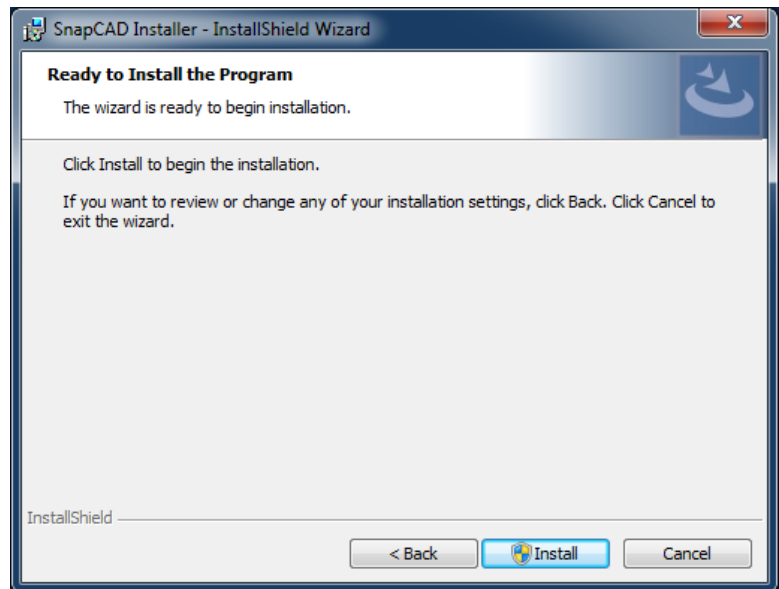

The SnapCAD installer will now ask where you would like to install the program to. Click "Next" to install to the default installation location (recommended), though you can choose to install it to any desirable location.

Step 4 – Start Program Installation

The installer will now confirm that you are ready to start the actual program installation. Click "Install" to start the program installation.

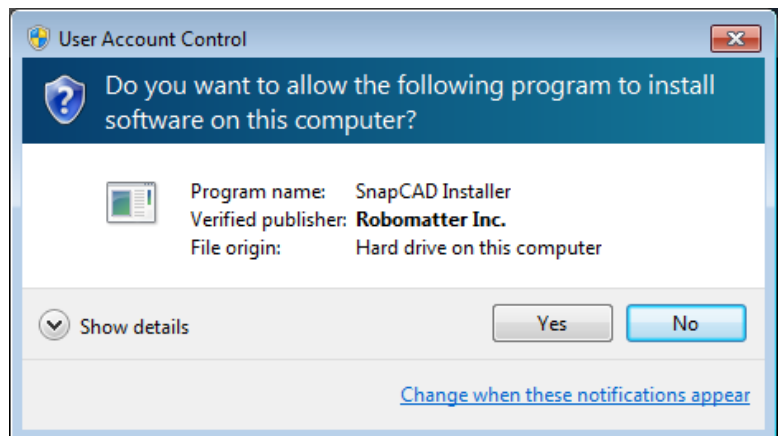

Note: This step requires administrator privileges.

Step 5 – Confirm Security Settings

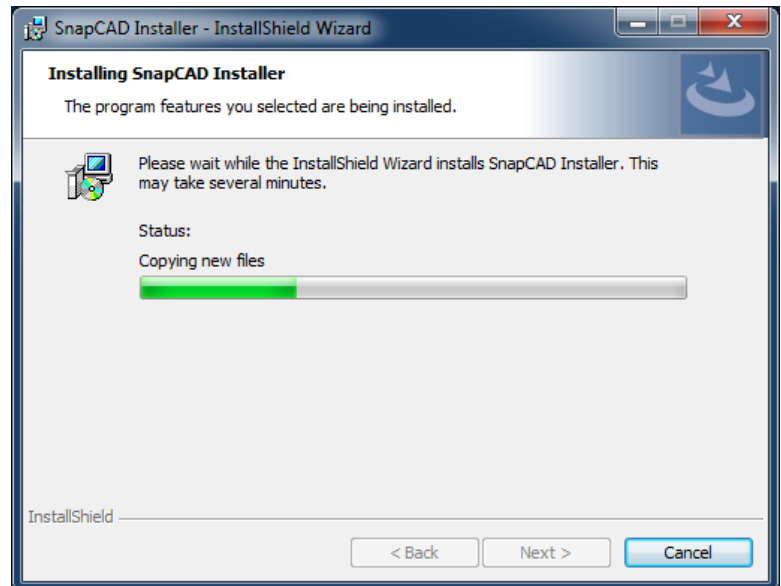

Depending on your computer's settings, a User Account Control window may appear. If it does, click "Yes" to continue the installation process.

Note: This step requires administrator privileges.

Step 6 – Finish Installation

The installer will now make the necessary changes to the computer for the program to work properly. This process may take several minutes. When completed, click the "Finish" button to complete the installation.

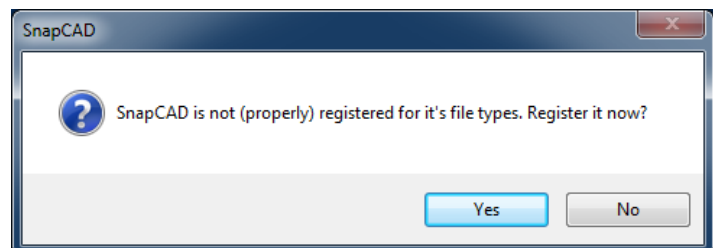

Step 7 – Open SnapCAD

You should now see a SnapCAD icon on your desktop; double click this icon to open the program.

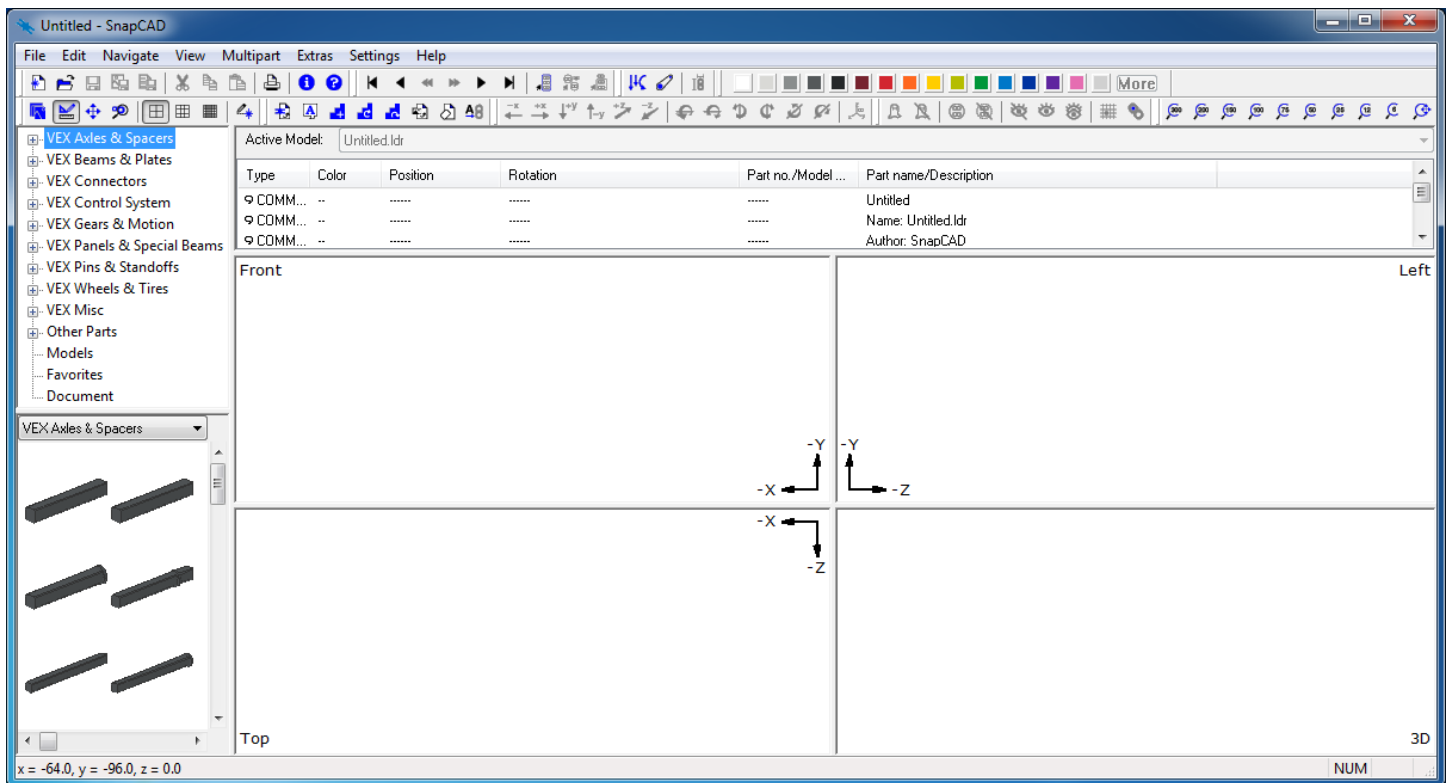

Step 8 – Register SnapCAD File Types

If this is the first time SnapCAD has been run on the computer, you will be prompted to register SnapCAD for its file types. Click "Yes" to continue.

Step 9 – Start Building!

If the installation was successful, you will now be able to use the SnapCAD program to build your own VEX IQ models!

Helpful tip: Check out the VEX IQ SnapCAD playlist on YouTube for more tutorials!
